5 months before the events of DERE EVIL EXE, an unknown developer releases a game. This game went through numerous iterations, and even survived a burning building.

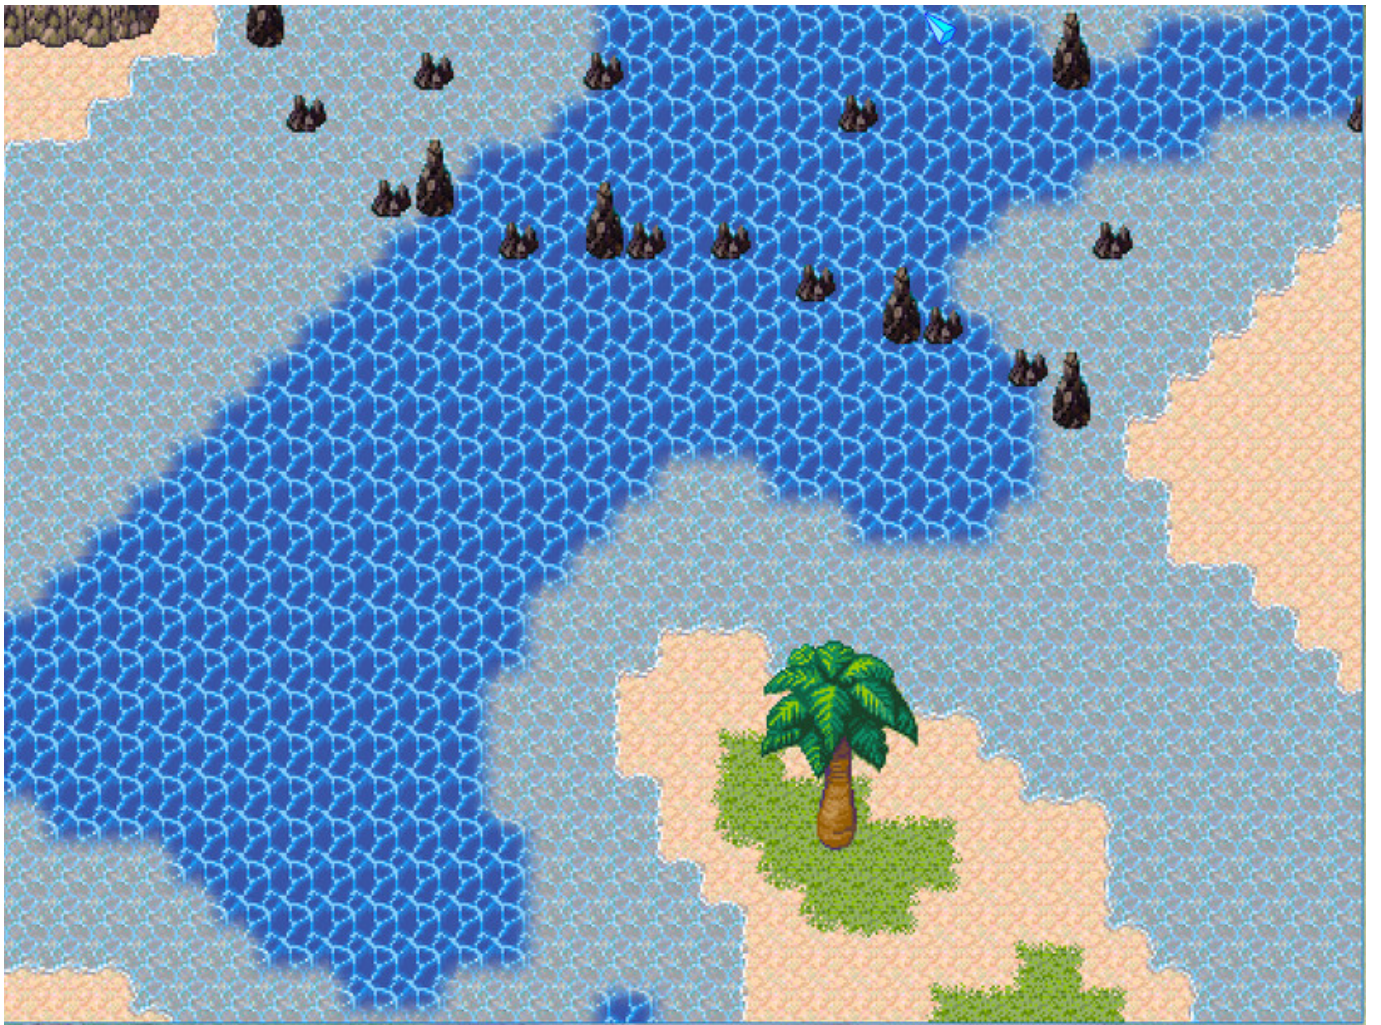

DERE .EXE : The First Fear is a terrifying thriller disguised as a 2d side-crolling pixel platformer rage game with retro NES-like visuals, 16-bit chiptune music, and a horror story that makes it a creepypasta come to life. The controls and the environments change from level to level. From controls with pixel precision and intuitiveness in one level, to a creepy glitched debauchery of controls in the next. Will you survive the the fear and rage?
